WIRING DIAGRAM

DTL 24 P

DTL 24 P combined with EPK / DPK channel fan and DHP electrical air heater

S1 - system off switch

S2 - system on switch

K1 - Fan on (US 16 contactor)

LW 9 - air flow monitor

DHP .. - Electrical air heater

F1 - temperature limiter

F2 - safety temperature limiter

K2 - heating release (K2 must be supplied by customer)

DPK..B - Centrifugal duct fan, three-phase AC

EPK..B - Centrifugal channel fan, AC

Potentiometer

SW - Setpoint generator 0°C to 30°C

Min - minimum limit for the supply air temperature

Max - maximum limit for the supply air temperature

CT - Cycle time 6 - 120 seconds

Coding switch

1 - Up (On) = Internal setpoint generator

1 - Down (Off) = External setpoint generator

2 - On/Off = Minimum limit On/Off

3 - On/Off = Maximum limit On/Off

The minimum and maximum limits can be activated separately or together.

① FL 30 P channel sensor, setpoint generator in the DTL 24P

2 Room sensor and setpoint generator in the FR 30 P

3 FL 30 P channel sensor, setpoint generator in the FR 30 P

FL 30 P supply air channel sensor for minimum and maximum limits

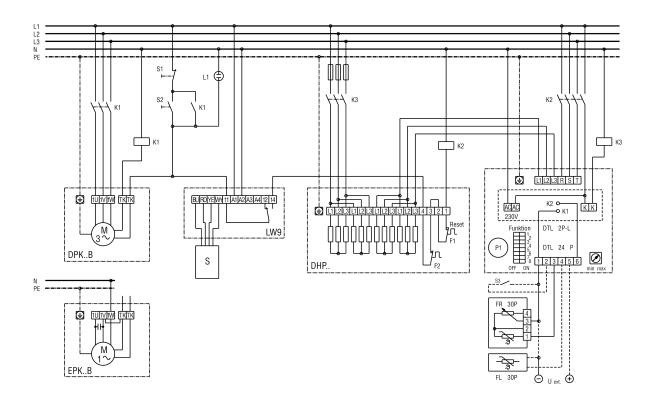

⑤ Remove bridge J1
